Only original replacements guarantee 100% reliability

ORIGINAL SPARE PARTS OF ADK SAVE YOU MONEY

The highest priority of all production plants is the continuity of production. Stoppages are not only very expensive but also may jeopardize the uniform quality of the product, the just-in-time programs and profit margins. An uninterrupted air production is as vital as a continuous supply of compressed air. Only original replacements and consumables of ADK can ensure this continuity.

Production and own internal testing of ADK parts offer absolute guarantee that each new component behaves like the part it replaces. To facilitate preventive maintenance, ADK has developed new service kits for all standard interventions. The content is based on the operating hours, reducing the need for inventory and saving money in the process.

THE BENEFITS OF THE SERVICE KITS

- » Preventive maintenance – simpler planning, less breakdowns.
- » Saves money – the whole kits are less expensive than the spare parts.
- » Fewer interruptions in the production – less interventions reduce the cost of maintenance.
- » Fewer distributions – all the parts needed are in the same box with a label.
- » Fewer inventories – less consumables and replacements in your warehouse.
- » Added value – the service of all the functions of the compressor is done every optimum interval with original spare parts, protecting your investment.

TECHNICAL ASSISTANCE

To do so, we have designed a system characterized by its rapidity and quality of attention.

The fundamental points on which we have worked are:

- » Availability of specialized technicians in each area (electronics or mechanics).
- » Service of preventive consultancy to avoid future problems or shortage of supplies of spare parts.
- » Direct telephone support with technicians of our plant.

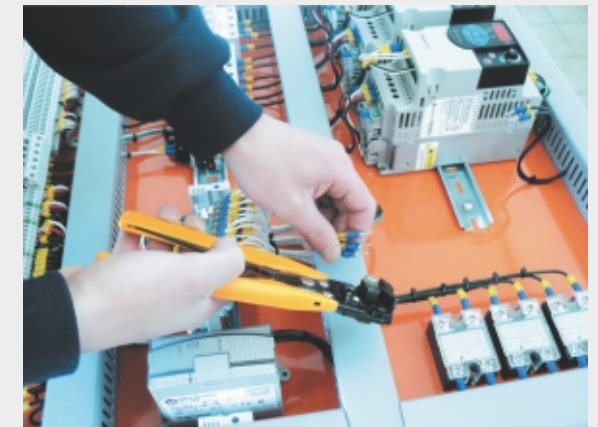

TECHNICAL SUPPORT

ADK knows about the importance of the decision to invest in the acquisition of packaging equipment.

That is why we lay special emphasis on developing a close collaboration with our clients as the mainstay of satisfaction, constantly working with a spirit of service and immediate attention.

We base ourselves on our extensive experience to provide comprehensive counseling from the initial approach of our clients about their projects, to design and manufacture the equipment that adjusts to the real needs of each business, providing assistance and service while the equipment is being produced.

Remote support, allowing to diagnose problems via internet with direct connections.

INSTALACIÓN Y PUESTA EN MARCHA

Realizada con técnicos propios de ADK, los cuales han recibido una formación especializada para tal tarea.

- » Formación de los operadores y personal de mantenimiento posterior a la puesta en funcionamiento del equipo.
- » Posibilidad de obtener certificación de buen funcionamiento del equipo en planta de ADK.
