PACKAGING MACHINES

Special packaging machines

BAKERY

The bakery sector requires flexible packaging solutions, which allow it to offer the quality of a traditional product in an attractive packaging, providing an excellent presentation and a better guarantee of conservation.

Bakery and similar products require special processing and, above all, special momentum.

ADK offers a wide range of solutions for the bakery sector. Complete packaging solutions with the highest quality standards required in the most important markets.

ADK offers two distinct packaging systems: Horizontal Flow Pack (HFFS) and Vertical Flow Pack (VFFS)

SOME APPLICATIONS

OUTSTANDING FEATURES IN STANDARD EQUIPMENT FOR THE PACKAGING OF BAKING GOODS

HORIZONTAL PACKAGING MACHINES (HFFS):

- » Transverse gag system with watertight grating.
- » Different types of transverse sealing heads (Rotating, rotating translation).
- » Different coding systems (Hot roll, Thermal Transfer, Inkjet).
- » Labeling system.
- » Inverted pleat reinforcement system of the pneumatic type.
- » Preservative liquid spraying system (with custom configurations) integrated into the feeding table.
- » Inert gas injection cannula (for modified atmosphere system). It does not include gas pipe or flow regulator.

VERTICAL PACKAGING MACHINES (VFFS):

- » Armed system with flat bottom.
- » Different types of dosing (Multihead Scales, Linear Weigher, Volumetric Vessels).
- » Different coding systems (Hot stamping, Thermal Transfer, Inkjet).
- » Labeling system.

TYPICAL APPLICATIONS

HORIZONTAL PACKAGING MACHINES (HFFS):

Hamburger buns, bread for hot dogs, bread for super hot dogs, sweet bread, bread crumbs, french bread, pre-pizzas, breadsticks, toasts, puddings, bridge rolls, mini pizzas, chips, easter bread ring, muffins, others.

VERTICAL PACKAGING MACHINES (VFFS):

Frozen bread rolls, breadcrumbs; different types of crackers, biscuits and breadsticks, others.

MAXIMUM PRODUCTION SPEED

HORIZONTALS (HFFS):

60/90 packs per minute (depending on product characteristics and applied equipment configuration).
Other required productions to be confirmed.

VERTICALS (VFFS):

35/40 packs per minute (depending on product characteristics and applied equipment configuration).
Other required productions to be confirmed.

PACKAGING MATERIALS USED

HORIZONTALS (HFFS):

BOPP (biaxially oriented polypropylene)
PE (polyethylene)

VERTICALS (VFFS):

BOPP (biaxially oriented polypropylene)
PE (polyethylene)

SOME OF THE USED EQUIPMENT FOR THE PACKAGING OF BAKING GOODS

» Serie H400/H500 (S)

» Serie H600/H700 (S)

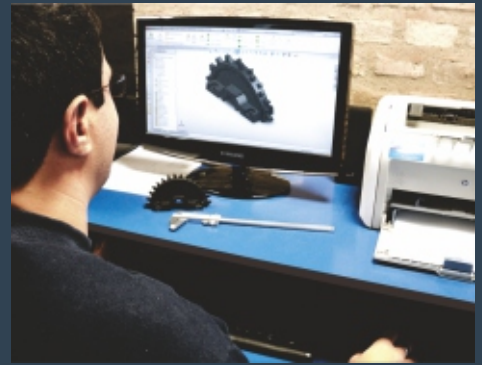

» Serie V400/V700/V1000

TECHNICAL SUPPORT

ADK knows about the importance of the decision to invest in the acquisition of packaging equipment.

That is why we lay special emphasis on developing a close collaboration with our clients as the mainstay of satisfaction, constantly working with a spirit of service and immediate attention.

We base ourselves on our extensive experience to provide comprehensive counseling from the initial approach of our clients about their projects, to design and manufacture the equipment that adjusts to the real needs of each business, providing assistance and service while the equipment is being produced.

Remote support, allowing to diagnose problems via internet with direct connections.

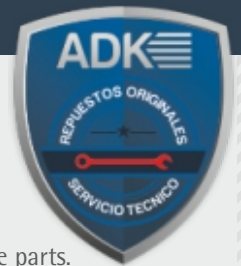

All the information provided herein is not a legally-binding, subject to change without notice

TECHNICAL ASSISTANCE

To do so, we have designed a system characterized by its rapidity and quality of attention.

The fundamental points on which we have worked are:

- » Availability of specialized technicians in each area (electronics or mechanics).
- » Service of preventive consultancy to avoid future problems or shortage of supplies of spare parts.
- » Direct telephone support with technicians of our plant.

INSTALLATION AND START-UP

It is done by ADK own technicians, who have received specialized training for such a task.

- » Training of operators and maintenance personnel subsequent to the setting up of the equipment.
- » Possibility of obtaining a certification of good performance of the equipment in ADK plant.
